Summary

Software Engineer with experience building backend platforms, web products, and data-driven solutions. Works from architecture through delivery, automating processes, modernizing legacy systems, and building secure, scalable integrations with Java/Spring Boot, Python/FastAPI, Node.js, and React.

Skills

- **Backend**: Java, Spring Boot, Python, FastAPI, Django, Flask, Node.js, Elysia, Apache Kafka, REST APIs, Microservices, C#/.NET, ASP.NET Core, CQRS, JWT, Keycloak (OAuth2, OIDC), Better Auth
- **Frontend**: HTML, CSS, SCSS, Tailwind CSS, JavaScript, TypeScript, Angular, React, Next.js
- **Databases**: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
- **DevOps & Tools**: Linux, Git, Docker, Kubernetes, Terraform, Ansible, GitHub Actions, CI/CD, NGINX, Caddy, Swagger/OpenAPI, Selenium, Playwright
- **Testing**: JUnit, Mockito, AssertJ, JaCoCo, Testcontainers

Work Experience

Laboratory of Telematics, Accessibility and Educational Projects (LTAP) - IFCE **Maracanaú, CE**
Full Stack Developer (Node.js, React, Elysia) May 2026 — present

Contributed to the development of an institutional PaaS that centralizes project, environment, and deployment management, integrated with GitHub and Coolify.

- Architected the institutional PaaS with TypeScript, Bun, Elysia, and React, establishing boundaries across management, infrastructure, and publication.
- Modeled lifecycles for 3 environments, development, staging, and production, with configuration inheritance in Prisma and PostgreSQL.
- Integrated GitHub and Coolify, incorporating application and database provisioning and deployments into the project-management workflow.
- Established project-level access controls, including authentication, authorization, invitations, and operational traceability, to govern platform operations.

Computer Vision and Engineering Center (NUVEN) - IFCE **Maracanaú, CE**
Backend Developer focused on Data (Python, FastAPI) Jul 2025 — present

Contributed to the development of an analytics platform that turns social-media data into intelligence and decision support.

- Architected ETL pipelines, unifying ingestion and processing for data from 3 social networks in a single analytical base.
- Designed an event-driven Kafka platform, decoupling the services in the data flow.
- Automated content classification and virality prediction, scaling analytical prioritization beyond manual triage.
- Converted thousands of records per cycle into actionable dashboards, queries, and KPIs for 2 multidisciplinary teams.

Movias Solutions - UECE **Remote**
Backend Developer focused on Data (Python, FastAPI) Oct 2025 — Mar 2026

Contributed to the development of a data-driven backend solution with microservices for ingestion, processing, and prediction.

- Architected Python/FastAPI microservices, isolating ingestion, processing, and prediction domains.
- Structured reusable components to support independent evolution of services and data-pipeline stages.
- Industrialized previously manual segmentation with an AI pipeline based on Scikit-Learn, classification, and K-Means.
- Standardized platform access through an API gateway, reducing integration complexity for consumers.

LabVicia - IFCE **Remote**
Full Stack Developer (Java, Spring Boot, Angular) Apr 2025 — Sep 2025

Contributed to the evolution of Integra-MEC, SETEC/MEC's administrative system, with a focus on security, business rules, and internal workflows.

- Structured Integra-MEC's identity and access layer with Keycloak, defining permissions for platform user profiles.
- Led full-stack delivery with Java, Spring Boot, Angular, and TypeScript, connecting business rules and UI in critical administrative workflows.
- Designed REST APIs with filtering, pagination, and reporting to support administrative workflows.
- Restructured document generation with JasperReports and evolved legacy rules, strengthening operational continuity and mitigating regressions.

Software Development Center (NDS) - IFCE **Maracanaú, CE**
Backend Developer (C#, .NET) Oct 2024 — May 2025

Contributed to the evolution of internal systems built with C#/.NET, REST APIs, and a modular-monolith architecture.

- Led the migration of a legacy system to a new C#/.NET API, preserving business rules and reducing transition risk.
- Restructured the domain with CQRS, decoupling commands and queries to accelerate product evolution.
- Increased delivery predictability through unit tests and code reviews.
- Drove technical alignment across frontend, DevOps, QA, and design to ensure consistent integrations and delivery.

Volunteer Work

Universidade Brasileira Livre Aug 2025 — present
Full Stack Developer - Open Source Contribution [github.com/Universidade-Livre/universidade]

Contributed to the development and evolution of UBL, an open-source academic platform for student progress tracking.

- Led the modernization of the open-source academic platform with Next.js, React, and TypeScript, establishing a sustainable foundation for evolution.
- Designed the backend with tRPC, Prisma, and PostgreSQL, embedding authentication and authorization with Better Auth from the outset.
- Structured curriculum paths and progress tracking for two undergraduate programs.
- Automated continuous delivery with Docker and GitHub Actions, establishing a CI/CD pipeline for the project.

Education

Federal Institute of Education, Science and Technology of Ceará (IFCE) Mar 2024 — 2027
Bachelor's Degree in Computer Science

Certificates

English Course - Advanced Level Jul 2025
Language and Education Center of Ceará (CLEC)

Languages

- **Portuguese**: Native
- **English**: Advanced
